Context

The Challenge

Life Insurance CPC (cost per click) is steadily rising year-over-year. Many insurance advertisers are reporting all-time high CAC and chalking it up as an unavoidable market condition. PolicyMe saw 20%+ annual increases in CPC each year since 2023, resulting in rising CAC.

The Solution

CPC inflation can't be avoided. It needs to be compensated for with smarter bidding, better data signals & prioritizing quality over quantity.

How We Rebuilt

We rebuilt the PolicyMe account in five measured, strategic steps for success.

- 1

Eliminated wasted Search Partner Network spend

Disabled low-quality partner networks that consumed 10% of the budget with zero purchases over 90+ days.

-9%
CAC
- 2

Trained Smart Bidding on down-funnel signals

Fed weighted offline conversions (Lead → Approved Policy → Customer) into Google, shifting algorithmic focus from raw form-fills to high-value buyers..

-29%
CAC
- 3

Rebalanced keyword match types

Reduced broad-match spend and expanded exact/phrase match on proven terms, securing higher-intent traffic within tighter guardrails.

-24%
CPL & CAC
- 4

Lifted Quality Score on top-spend keywords

Restructured ad-to-keyword alignment to boost relevance. Lifted top 100 non-brand keywords 7.32/10 to 8.40 / 10 Quality Score, unlocking +13% impression share at lower CPC.

-8%
CPC
- 5

Installed a structured A/B testing cadence

Continuous tests across bid strategy, landing pages, ad copy, match types, demographics, and platforms (incl. YouTube Shorts) to compound early wins into longterm performance

“Within our first full month of working with Plateau, we'd seen our all- time best month for client acquisition on paid search, with CAC 40% below our internal target. *Plateau PPC is constantly testing, trimming inefficient spend and finding new areas to optimize. They feel more like a growth partner than a vendor.*”
